Education

York University, Lassonde School of Engineering Sep 2024 – 2028 (expected)

Bachelor of Arts, Computer Science (Honours) · Toronto, ON

Courses completed: Computer Organization · Fundamentals of Data Structures · Software Design · Introduction to Database Systems · Software Tools · Professional Practice in Computing · Advanced Object-Oriented Programming · Introduction to the Theory of Computation · Introduction to Computer Science and Programming · Research Directions in Computing · Discrete Mathematics for Computer Science · Introduction to Logic for Computer Science · Applied Linear Algebra · Integral Calculus with Applications · Elementary Probability

This term: LE/COOP 2100 Professional Development for Co-op Students · LE/COOP 2109 Lassonde Co-op Work Term

Certifications

- **Mastering Design Patterns with Java**, CodeSignal, April 2026 · verify
- **Spring Boot REST API with Java & Gradle**, CodeSignal, May 2026 · verify

Experience

Learning Technology & AI Enablement Intern Jul 2026 – Present

Groupe Bel Canada · Mississauga, ON (remote) · Co-op work term

- Produce interactive e-learning modules and quizzes for the company's internal learning academy.
- Edit and rebuild training videos for internal learning programs.
- Build reporting in Power BI on how employees engage with learning content.
- Prepare training that helps the team use AI tools in their day-to-day work.

Key accomplishment: published 18 interactive learning modules to the company's learning platform, and found and fixed a completion-tracking bug that was stopping learners from finishing a quiz.

SEO & Web Developer Jul 2026 – Sep 2026

Swimingo (via Riipen Level UP) · Remote · Florida Expansion & Search Console Optimization, a paid work-integrated learning project, 60 hours

- Owned the Florida-expansion web workstream end to end: 14 Florida pages live (a Florida hub, 11 town pages and 2 instructor-recruitment pages), shipped through six pull requests merged into the company's codebase.
- Audited how the site presented itself to Google. Of the three defects I found, two were my own and I fixed them, including conflicting canonical ("official address") tags on the Florida pages. I flagged the third, a site-wide mismatch, and the company's developer fixed it.
- Added an automated check to the site's build so every public page must have a unique title, a unique description and exactly one canonical tag, so broken metadata can't ship.
- Wrote the final report for the business owner, with every number reproducible from the raw Search Console data.

Key accomplishment: the first six Florida pages went from zero to 310 Google search impressions, and one town, Cooper City, reached Google's first page about five weeks after going live. I also diagnosed a wrong-address indexing leak: 17.5% of impressions at the start, 6.9% by the end.

Full Stack Developer (On Call)

Mar 2026 – Present

Pho Ginger · Toronto, ON

- Built and maintain the restaurant's online ordering platform as its sole developer: a customer storefront plus a private staff dashboard for managing orders.
- Designed for security from the start: signed session cookies, order totals recalculated on the server so prices can't be tampered with, rate limiting, and CSRF protection.
- Gave the non-technical owner a self-serve menu manager (sold-out toggles, price and item edits, photo uploads), so menu changes no longer need a developer.
- Wrote a 22-test end-to-end suite with Playwright alongside unit tests in Vitest.

Key accomplishment: the platform is live at gingercuisine.ca and serves real customers, about 50 a day by the owner's count.

Technical Lead, UpNxxt (via Riipen Labs)

Jun 2026 · 3-week sprint

Remote · paid work-integrated learning project

- Held the technical and feasibility role on a student team producing customer-experience recommendations for an edtech startup that teaches AI literacy to children.
- Wrote Playwright browser-automation scripts that walked the product's sign-up and lesson flow, captured every screen, and measured how much text each screen asked a child to read.
- Generated the team's 17-slide report programmatically with python-pptx so it could be rebuilt after every edit, and wrote 5 of its slides.

Key accomplishment: caught a false "users get stuck on slide 5" finding by checking my script's results against the screenshots. The bug was in my own script, and I fixed it before it reached the client.

Inventory Management Associate

Apr 2025 – Aug 2026

Aritzia Distribution Centre · Vaughan, ON · Part-time

- Tracked inventory in real time with warehouse management systems and barcode scanning, keeping SKU counts accurate in a high-volume warehouse.
- Ran cycle counts, variance reports and quality checks so stock data stayed reliable.

Key accomplishment: helped scale inventory processes as volume increased.

Skills

Programming	TypeScript, JavaScript, Python, Java, SQL, HTML/CSS
Frameworks	React, Next.js, React Native (Expo), FastAPI, Spring Boot, Tailwind CSS
Data	PostgreSQL, MongoDB, Redis, SQLite, NumPy, Pandas, Power BI
Testing and delivery	Playwright, Vitest, Pytest, JUnit, Git and GitHub, GitHub Actions, Docker, Vercel
AI	Claude Code (custom skills, hooks, multi-agent workflows), prompt engineering
Office and media	Microsoft 365 (Excel, PowerPoint, SharePoint, Teams), Adobe Premiere Pro
Languages	English, French (fluent), Vietnamese
